

PRESIDEULTRA[®]

A VERDESIAN NUE SOLUTION™

Preside Ultra[®] super concentrated soybean inoculant helps provide soybeans with increased levels of nitrogen in the plant. The addition of Take Off[®] technology leads to earlier and more uniform emergence, producing a more powerful stand capable of producing higher yields.

FASTER EMERGENCE AND ESTABLISHMENT

- Take Off[®] technology improves the utilization of nutrients
- Take Off improves the utilization of seed reserves to establish the plant
- Average 15% improved stand for the critical first four weeks
- Healthier, stronger plants for better yields

MORE RHIZOBIA

- Soybeans require 5 lbs. of nitrogen per bushel produced
- Preside Ultra provides up to 2X the amount of rhizobia per seed (compared to the competition) to produce more N
- Coupled with Take Off, more rhizobia can improve effective nodule mass by up to 65%, creating greater N-fixing capacity which ultimately can be used to produce higher yields

LARGER TREATMENT OFFERINGS

- Preside Ultra can be offered in small batch quantities up to bulk
- Offered in 50 or 500 unit sizes for traditional application
- Offered in FlexConnect-enabled 200 unit and 1000 unit bulk-like sizes
- Using Preside Ultra coupled with FlexConnect gains operational efficiencies and agronomic benefits to provide highest-quality inoculant on every seed

REGION

CROP

Soybean

TIMING

120 days on seed

RATE

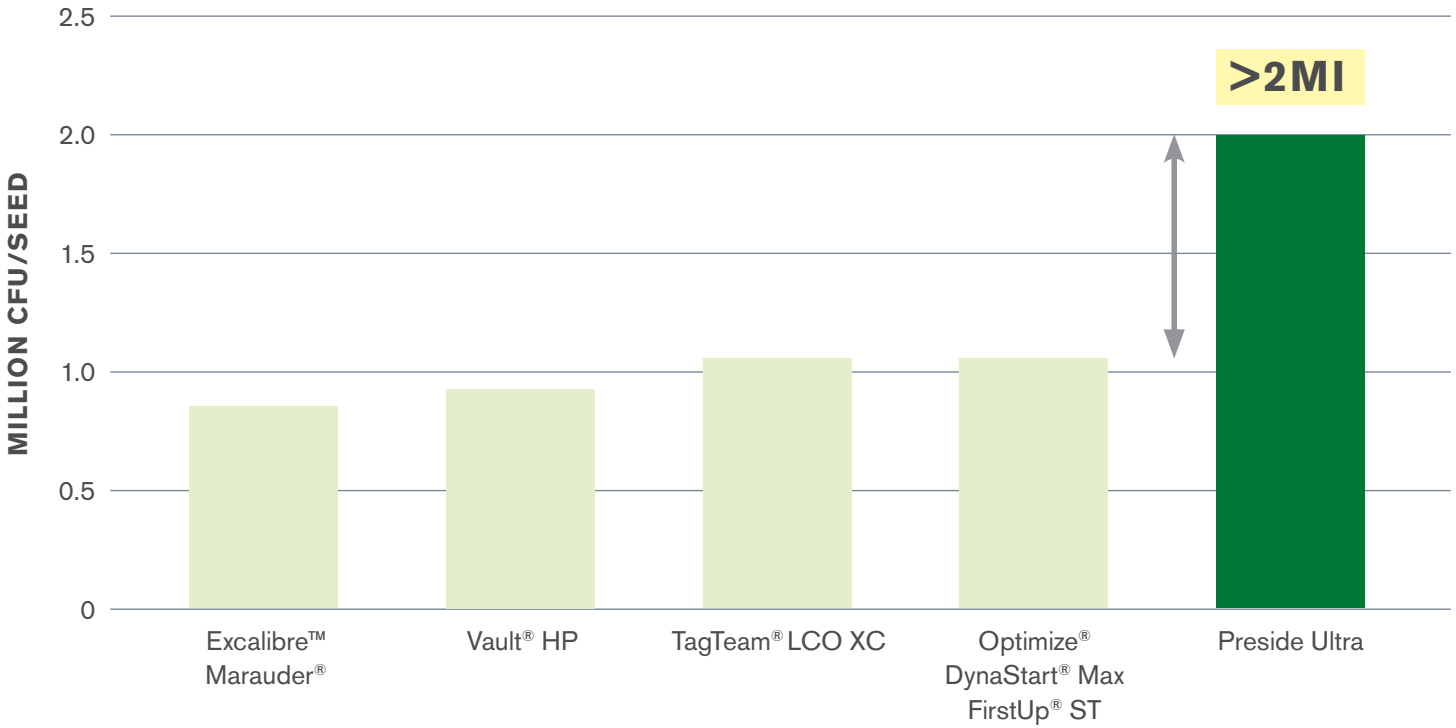

1.5 fl. oz. per cwt.

PACKAGE

1 500 unit per case,
4 50 units per case;
200 unit bulk, 1000 unit bulk

INOCULANT APPLIED PER SEED BY PRODUCT:

FLEXCONNECT DELIVERS THE HIGHEST QUALITY PRODUCT

Mixing inoculants in contaminated tanks causes a rapid reduction in rhizobium numbers. FlexConnect mixes inoculant without contamination which maintains rhizobium numbers on the seed. FlexConnect protects the inoculant in the original package for 14 days, eliminating waste.
