

# PRIMO GX2

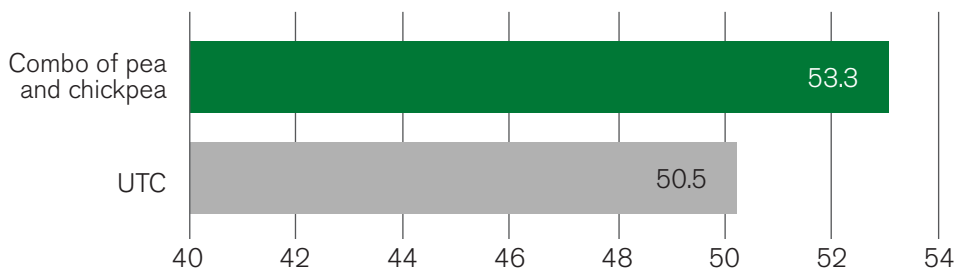

A VERDESIAN NUE SOLUTION™

## Introducing Primo GX2 Pea/Vetch/Lentil/Chickpea/ Garbanzo – the first combined granular inoculant product for pea/lentil and garbanzo in the same bag.

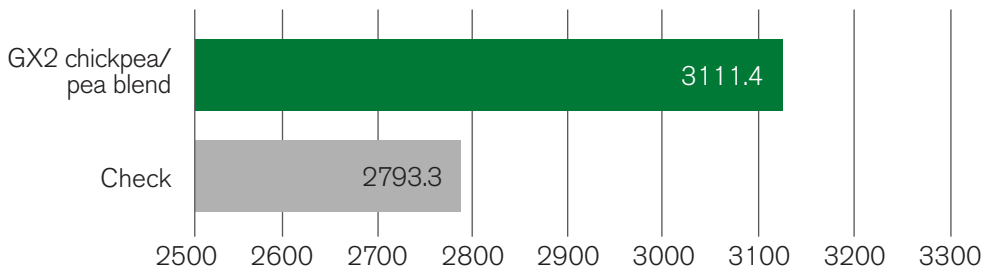

Primo GX2 is an in-furrow, multi-action granular inoculant that brings more nitrogen to the plant and performs well in harsh planting conditions. Verdesian Life Sciences has made it easier for you to switch crops as market conditions dictate without having to decide which inoculant type to keep in the warehouse or shed. Primo GX2 Pea/Vetch/Lentil/Chickpea/Garbanzo gives you the option to plant either crop without having to take one inoculant back and get the other.

Keeping the rate of inoculant similar to the individual products allows you the ability to switch without recalibrating your planter. And the best news? You won't give up yield in the process.
