GENERAL INFORMATION

ReKovery 2-0-21 is designed for foliar application on plants to prevent or correct nutrient deficiencies that may limit crop growth and yields. It is water soluble and nontoxic to plants when applied as directed. For best results, apply **ReKovery 2-0-21** according to recommendations based on plant tissue or soil analysis.

DIRECTIONS

Shake well before use. Keep from freezing. Dilute one part **ReKovery 2-0-21** with 20 or more parts water. Apply by a spray method and with an adequate amount of water that will provide complete coverage of the plants. **Do not apply undiluted.**

ReKovery 2-0-21 can be included in a regular spray program on crops. Consult with a Verdesian Life Sciences representative on compatibility with other spray materials. The rate of application will depend on the crop, stage of growth, and severity of deficiency. The maximum recommended rates are for mature, full-sized plants. Reduce the rates proportionately when spraying smaller plants.

RECOMMENDATIONS

Field Crops and Vegetables: Apply 2 quarts to 2 gallons per acre during periods of rapid growth or nutritional stress. The application may be repeated 2 or more times through the growing season.

Tree Crops/Hops: Make an application of 2 quarts to 2 gallons per acre during the fruit development stage. The application may be repeated at 2 to 4 week intervals through the growing season.

Grapes and Berries: Make an application of 1 to 3 quarts per acre after active growth begins. The application may be repeated at intervals of one week or more through the vegetative-growth period.

Turf: Apply 1 to 2 fluid ounces per 1000 square feet during periods of active growth.

Ornamental Trees, Shrubs, and Flowering Plants: Dilute at a rate of 32 fluid ounces in 10 or more gallons of water and spray to complete coverage.
