

primacyALPHA[®]

A VERDESIAN NUE SOLUTION™

Primacy ALPHA[®] works inside the plant to stimulate the efficient assimilation and utilization of nutrients.

Primacy ALPHA also functions as a reproductive growth catalyst that collectively stimulates, intensifies and optimizes plant metabolism; encourages rapid plant nutrient uptake; promotes plant growth and enhances consistent crop quality and yield potential.

EARLY GROWTH AND FLOWERING ENHANCER THAT WILL HELP DRIVE MORE YIELD

- Primacy ALPHA promotes root and shoot growth, bud development, flowering and – most importantly – cell division to drive a more robust plant
- Verdesian **Take Off[®]** technology included in the compound further optimizes nitrogen metabolism, carbon dioxide fixation and improved nitrogen uptake to increase the rate of photosynthesis to grow stronger, faster, and yield more

EASE OF USE

- Primacy ALPHA is tank-mix compatible with most commonly used pesticides and fertilizers and can be applied aerially, foliarly or through your irrigation system

IMPROVES THE HEALTH AND RESILIENCE OF THE PLANT

- By stimulating the Shikimic Acid Pathway, the Take Off element increases output of essential growth metabolites
- The cytokinin precursors have been shown to further slow aging and delay senescence

IN THE FIELD

Primacy Alpha on Canola with Cotegra[®] Fungicide at flower

"You could visually see that the treated area was going to yield more, larger pods. Primacy Alpha treated ended up yielding 5 bu more than the untreated. I definitely plan to include Primacy Alpha in my program moving forward"

– Braden Drul - Drul Farms Ent. (Oakburn, MB)

PRIMACY ALPHA, WHAT IS IT?

Primacy ALPHA is a unique blend of the following nutrients and patented technologies.

TAKE OFF: optimizes nitrogen metabolism, carbon dioxide fixation, and improves nitrogen uptake to increase the rate of photosynthesis to grow faster, stronger, leading to increased yield

ALPHA PACKAGE: Provides essential plant nutrition and proprietary technology that enhances plant growth and floral production. It's a metabolic precursor to cytokins which boosts cell division.

ESSENTIAL NUTRIENT PACKAGE:

Total Nitrogen0.3%
Soluble Potash0.7%
Sulfur0.3%
Boron0.1%
Manganese0.5%
Zinc0.5%

MSM (DiMethyl Sulfone) unique chemistry allowing for rapid absorption and utilization by plants.
