Nutri-Phite® is a biostimulant phosphite with a unique formulation of phosphorous acid and proprietary compounds for greater stability and performance than generic alternatives.

WHAT ARE PHOSPHITES?

Phosphites are a type of phosphorous acid formulated for rapid plant uptake that can produce multiple plant responses. This includes stimulation of nutrient uptake. Phosphites do not replace phosphates and should therefore be used as a supplement to a complete nutrient application program.

WHY NUTRI-PHITE?

Nutri-Phite is proven to enhance yield and quality of agricultural and ornamental crops.

Nutri-Phite contains a proprietary stabilization technology that enables reliable tank mixing and plant uptake. Originally developed by the University of California Riverside, Nutri-Phite sets the standard for premium phosphite formulation and performance.

HOW IS NUTRI-PHITE USED?

Nutri-Phite products can be applied directly to plant foliage, or to the soil. Specific formulations are available for these different application methods, for unique nutritional needs, in higher concentrations, and in combination with patented technologies such as PLUS and Take Off.

NUTRI-PHITE PREMIUM FORMULATIONS

Verdesian offers a complete line of premium Nutri-Phite formulations to fit crop needs.

TAKE OFF: Verdesian's patented Take Off biostimulant technology improves plant uptake and increases metabolic efficiency of nutrients, fueling optimum plant growth and nutrient use efficiency delivering increased plant vigor, growth, and productivity. Take Off is a proven technology in a wide array of products and crops.

PLUS: Developed by the University of California Riverside, Verdesian's PLUS technology is a metabolic Cytokinin precursor, boosting cell division and multiplication that enhances plant growth.

MAGNUM: Providing higher concentrations of phosphorous acid, Magnum formulations are deployed in situations where crop conditions call for a higher nutrient rate.

DESIGNED FOR COMPATIBILITY

Phosphites are often tank mixed with micronutrients, which contain reactive cations. Unstabilized phosphites combine with these cations, rendering the phosphite and the micronutrients unavailable to the plant.

All Verdesian phosphites are stabilized with a proprietary technology to protect the integrity of Nutri-Phite and the tank mix partners.
