

# SAFEZONE™

A VERDESIAN NUE SOLUTION™

## Reduce soluble salts in root zones.

Safe Zone™ is a liquid soil treatment used for dispersing accumulated salts from the soil profile to reduce soluble salts in the root zone. It can be used in all types of irrigation systems to move accumulations of salt below the root zone. This treatment can lead to increased yield potential by improving germination, water percolation and nutrient uptake.

### THE DETAILS

- Spray on soil surface and water within 48 hours
- Works with all types of irrigation systems, such as: flood, furrow, low volume, drip, sprinkler and center pivot

### APPLICATION INSTRUCTIONS

Safe Zone can be used in all types of irrigation systems, such as flood, furrow, low volume, drip irrigation, sprinkler and center pivot to help move salts downward in the soil and away from the roots. It can also be sprayed on the soil surface and should be watered within 48 hours.

**High Saline Soil:** Use rate is 4 qts/acre for moderately sensitive plants

**Moderate Saline Soil:** Use rate is 2-3 qts/acre for moderately tolerant plants

**Maintenance Rates:** Use rate is 1-2 qts/acre for moderately tolerant plants

### COMPATIBILITY

In all cases, it is recommended that a jar test for compatibility be conducted.
