FlexConnect-enabled
Verdesian inoculants

Inoculate with precision. FlexConnect™ is the first closed transfer system for liquid soybean inoculants that rises to the advancements in application equipment.

DELIVERING THE HIGHEST QUALITY PRODUCT FOR HIGHER YIELDS

- FlexConnect mixes inoculant without contamination, which increases rhizobium numbers on the seed by **up to 90%** over traditional mixing in contaminated mix tanks
- Protects inoculant in the original package for **up to 14 days**, eliminating waste. Traditional inoculant bladders expire within 24 hours of opening.
- FlexConnect-enabled **Primo R1** and **Preside Ultra** inoculant means a bigger return on investment thanks to protected quality, more rhizobia and higher yields

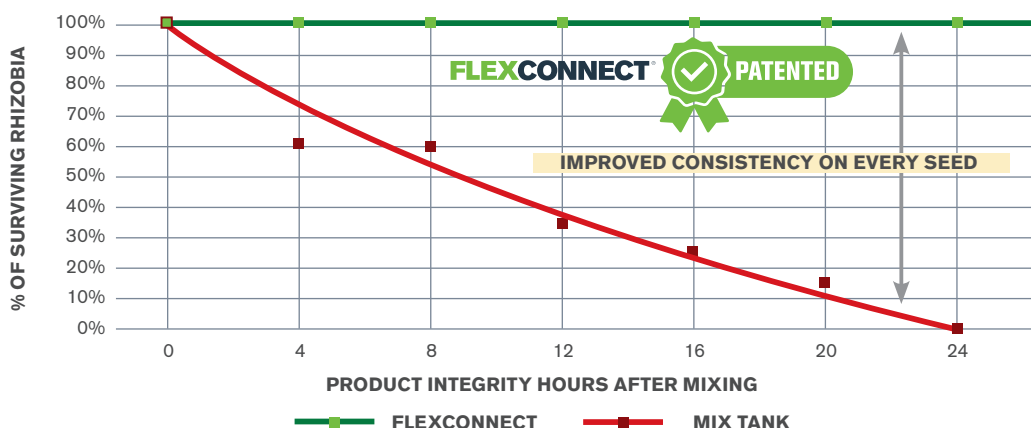

MIXING AND HANDLING WITHOUT THE WASTE

The FlexConnect system ensures that the inoculant is delivered with precision and sterility to the treater, resulting in metered volumes with less cleanup and operator handling. The system boosts efficiency by helping you protect product quality, treat the seed you need when you need it, and waste less inoculant, saving you time and money.

- Inoculate the amount of seed you need, and save the rest for up to 14 days
- Reduce time wasted mixing, handling and cleaning
- Flexible treatment volumes, inoculant package size doesn't determine how much seed you must treat in a day
- Deliver highest quality product to every unit treated, not just the first unit treated

FLEXCONNECT DELIVERS THE HIGHEST QUALITY PRODUCT

Mixing inoculants in contaminated tanks causes a rapid reduction in rhizobium numbers. FlexConnect mixes inoculant without contamination which maintains rhizobium numbers on the seed. FlexConnect protects the inoculant in the original package for 14 days, eliminating waste.
