GENERAL RECOMMENDATIONS

A liquid plant food containing nutrients designed to correct deficiencies. The product can be
applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados,
grapes, melons, ornamentals, turf, pasture, range, grasses and most other crops.

Contact your Certified Crop Advisor for specific recommendations for your area.

WARNING

SHAKE WELL BEFORE USING. When mixing with UAN 32, use up to one gallon of water per
one gallon of UAN 32 to ensure complete and thorough mixing. DO NOT use with ammonium
thiosulfate (Thio-Sul®) or potassium thiosulfate (KTS®). (Thio-Sul and KTS are registered
trademarks of the Tessenderlo-Kerley Co.)

DIRECTIONS FOR USE

Soil applications can be incorporated in liquid fertilizer or applied separately. This product
is most effective when applied through an irrigation system or banded. This product is
compatible with acid based fertilizers and other plant nutrients. If unfamiliar with its use,
be sure to check with a crop advisor for compatibility.

APPLICATION RATES

Apply 2 to 10 gallons per acre mixed with compatible fertilizers. Add to a partially filled
tank and continue to fill the tank. If mixing permits, allow agitation of the solution in tank
to ensure uniform mixing. To use alone, apply the following rates if you do not have a soil
or leaf analysis:

For Minor Deficiency: 2 to 5 gallons per acre

For Moderate and Severe Deficiency: 5 to 10 gallons per acre

After initial application, monitor petiole nutrient levels and apply again if necessary.

IRRIGATION SYSTEM APPLICATION

Applications can be made through certain irrigation systems including, but not limited to,
low volume systems and typical agricultural sprinkler systems. The specific injection
equipment and irrigation system must conform to all federal, state and local regulations
pertaining to the fertilization of plants through an irrigation system. Accurate and
properly calibrated injection equipment and an irrigation system that is operated at
maximum distribution uniformity will help avoid plant injury and/or product
ineffectiveness. For best results, with the exception of center pivot and lateral systems,
apply this product toward the end of the irrigation set. Allow sufficient time for the
product to be flushed completely out of the entire irrigation system prior to turning off the
irrigation water. Contact your Certified Crop Advisor for specific recommendations for
your area.
